Comments

Penicillium notatum is widely distributed in soils and can be isolated from decaying vegetable and leaf litter. It can also be found on stored cereals and hay. It is an important in-house mold found on stale bread, fruits, nuts and cheese. It has no seasonal variation but reaches peak concentrations in winter and spring. Specific IgE antibodies to Penicillium notatum have been found in 90% of patients with atopic hypersensitivity, commonly leading to Asthma.
