**Comments**

Horses are still used for work today in developing countries whereas in developed countries they are mainly used for recreational riding. Horse dander is encountered in antique furniture as well as in factories of leather goods or baseballs. Horse dander allergy commonly occurs among people who regularly handle horses resulting in induction or exacerbation of Asthma, Allergic Rhinitis & Allergic Conjunctivitis. This allergy is reported to decrease with age. Contact urticaria from horse saliva has been reported. Horse allergens can be carried on clothing and thus become a part of house dust in urban environments.

**Potential Cross Reactivity**

Seen with fallow deer.
