

Name	: Mr. DUMMY A047	Collected	: 16/1/2017 1:14:00PM
Lab No.	: 131268771	Age: 20 Years	Gender: Male
A/c Status	: P	Ref By: SELF	Report Status: Final
		Received	: 16/1/2017 1:37:41PM
		Reported	: 16/1/2017 4:26:25PM

Test Name	Results	Units	Bio. Ref. Interval
ALLERGY, INDIVIDUAL MARKER, CELERY, SERUM (FEIA)	0.05	KUA/L	<0.35

Interpretation

QUANTITATIVE RESULT IN KUA/L	LEVEL OF ALLERGEN SPECIFIC ANTIBODY	SYMPTOM RELATION
<0.10	Undetectable	Unlikely
0.10-0.50	Very low	Uncommon
0.50-2.00	Low	Low
2.00-15.00	Moderate	Common
15.00-50.00	High	High
50.00-100.00	Very High	Very High
>100.00	Very High	Very High

Note

1. Sensitized patients show elevated levels of specific allergens. Generally the higher the kUA/L value, the more exposed the patient is to the allergen.
2. In cases of food allergy, specific IgE antibodies may be undetectable inspite of a convincing clinical history because these antibodies may be directed towards allergens that are revealed or altered during industrial food processing, cooking or digestion and therefore do not exist in the original food for which the patient is tested.
3. All results should be interpreted in relation to the individual case history.

Comments

Celery is a herbaceous biennial plant in which the stalk is consumed both raw and cooked. Celery seed is dried and used as a spice. Celery root is also eaten in a powder form as an ingredient of spice mixtures and also for medicinal purposes. There is a high prevalence of allergy to celery leading to oral symptoms, laryngeal edema, bronchial asthma, urticaria and shock. It is also associated with food dependent exercise induced anaphylaxis. Occupational dermatitis has been reported in gardeners. It's ingestion adversely affects individuals with irritable bowel syndrome.

Potential Cross Reactivity

Seen with mugwort and birch pollen.
