| Lab No. | : 131268810 | Age: 25 Years | Gender: Male |
| A/c Status | : P | Ref By : SELF | Report Status : Final |
| | | Received | : 16/1/2017 1:55:32PM |
| | | Reported | : 16/1/2017 5:10:53PM |

| Test Name | Results | Units | Bio. Ref. Interval |
|--|---------|-------|--------------------|
| ALLERGY, INDIVIDUAL MARKER, MUSSEL, SERUM (FEIA) | 0.10 | KUA/L | <0.35 |

Interpretation

| QUANTITATIVE RESULT IN KUA /L | LEVEL OF ALLERGEN SPECIFIC ANTIBODY | SYMPTOM RELATION |
|-------------------------------|-------------------------------------|------------------|
| <0.10 | Undetectable | Unlikely |
| 0.10-0.50 | Very low | Uncommon |
| 0.50-2.00 | Low | Low |
| 2.00-15.00 | Moderate | Common |
| 15.00-50.00 | High | High |
| 50.00-100.00 | Very High | Very High |
| >100.00 | Very High | Very High |

Note

1. Sensitized patients show elevated levels of specific allergens. Generally the higher the KUA/L value, the more exposed the patient is to the allergen.
2. In cases of food allergy, specific IgE antibodies may be undetectable inspite of a convincing clinical history because these antibodies may be directed towards allergens that are revealed or altered during industrial food processing, cooking or digestion and therefore do not exist in the original food for which the patient is tested.
3. All results should be interpreted in relation to the individual case history.

Comments

Mussels have been found in cooler seas and where they attach themselves to smaller objects or to one another with threads. The mussel is highly productive in culture and ranges from the Pacific ocean, both sides of the Atlantic and the Mediterranean.

Potential Cross Reactivity

Some cross-reactivity to oyster has been seen.
