

Name	: Mr. DUMMY H124	Collected	: 18/1/2017 2:48:00PM
Lab No.	: 134315858	Age: 25 Years	Gender: Male
A/c Status	: P	Ref By : SELF	Report Status : Final
		Received	: 18/1/2017 3:05:58PM
		Reported	: 18/1/2017 4:32:09PM

Test Name	Results	Units	Bio. Ref. Interval
PARTIAL THROMBOPLASTIN TIME-LUPUS ANTICOAGULANT SPECIFIC; PTT-LA (Photo Optical Clot Detection)	32.00	sec	25.78 - 32.58

Note

1. Results should be clinically correlated
2. Test conducted on Citrated plasma

Comments

Lupus Anticoagulants (LAs) are heterogenous IgG or IgM autoantibodies which interfere with phospholipid dependent coagulation tests, particularly PTT. These are associated with SLE, thrombocytopenia, recurrent spontaneous abortions & thromboembolic disease states. Abnormal PTT-LA tests have been reported in 2-15% of apparently asymptomatic general population with many of these antibodies being transitory. Persistent LAs are associated with an approximate 30% risk of developing symptoms characteristic of Antiphospholipid Syndrome. This test may be prolonged in congenital coagulation factor deficiencies, circulating anticoagulants, hepatic disorders, Vitamin K antagonist therapy, Heparin, treatment with thrombin inhibitors & Disseminated Intravascular Coagulation.
