INTERPRETATION

RESULT	SCORE
Non immunoreactive	0
Immunoreactive in 1-25% cells	1+
Immunoreactive in 26-50% cells	2+
Immunoreactive in 51-75% cells	3+
Immunoreactive in 76-100% cells	4+

COMMENTS

CD23: It highlights Follicular dendritic cell meshworks present in various Lymphomas like Follicular Lymphoma and Mantle cell lymphoma. CD23 is positive in a sub population of B cells and Follicular dendritic cells (Apical light zone and Mantle zone of lymphoid follicle). It helps to distinguish B CLL / SLL (positive CD23) from Mantle cell lymphoma and Extranodal marginal B cell lymphoma (negative CD23).

NOTE:

1. Detection system used is Polymer HRP
2. The impression is based on the material submitted and is not a complete surgical pathology report.
3. False negative IHC results due to inadequate fixation of the material sent for evaluation cannot be excluded.

FIXATION REQUIREMENTS

- A. The volume of formalin fixative should be atleast 10 times the volume of the specimen.
- B. Decalcification solutions with strong acids should not be used.
- C. Specimens should be immersed in fixative within 1 hour of the biopsy /resection procedure (time of removal & time of immersion to be mentioned)
- D. In all resection (large) specimens, the tumour must be bisected prior to immersion in fixative.
