Test Name	Results	Units	Bio. Ref. Interval
BENZODIAZEPINE SCREEN, URINE (Lateral Flow Immunoassay)			Negative

Note

- A single urine test cannot differentiate casual use from chronic drug abuse.
- Urine drug testing cannot predict extent of impairment, drug dose or exact time of use.
- This is a screening test. All positive results must be confirmed by Gas chromatography/Mass Spectrometry (GC/MS).
- Negative results indicate absence of drug in urine or concentrations below the assay cutoff.

Intended use

1. Drug abuse treatment programs
2. Pain management clinics
3. Organ transplantation programs
4. Psychiatric programs

Comments

Benzodiazepine estimation is a valuable aid in the evaluation of patients with unknown cause of CNS depression. The detection time in urine is extremely variable and depends on factors such as type of drug ingested, dose and duration of its usage. False positive results may be seen with Benzotropine, Clotrimazole, Fenoprofen, Sertraline.
