

**HLA- DR7(DRB1*07), DISEASE
ASSOCIATION, WHOLE**

BLOOD

(SSOP-LUMINEX)

Positive /
Negative

Comment

HLA –DR7 is fairly common antigen present in approximately 14% of Indian population . It is associated with Psoriasis vulgaris, Graves’ disease, , Minimal change glomerulonephritis and some cases of Rheumatic fever. HLA-DR7 expression is linked to T.cruzi infection with cardiomyopathy / Chaga’s disease. It may also be expressed in cases of Sclerosis / lupus associated anti-apolipoprotein antibodies.
