HIV 1 & 2 ANTIBODIES SCREENING TEST, SERUM			

Final Result : Negative

HIV 1 / 2 & P 24 COMBO TEST
(CMIA)

Index Value	0.2
Result	Non Reactive

Interpretation

RESULT IN INDEX	REMARKS
< 1.00	Non Reactive
>= 1.00	Provisionally Reactive

Comments

Non Reactive result implies that antibodies to HIV 1 / 2 have not been detected in the sample. This means the patient has either not been exposed to HIV 1 / 2 infection or the sample has been tested during the "window phase" i.e. before the development of detectable levels of antibodies. Hence a Non Reactive result does not exclude the possibility of exposure or infection with HIV 1 / 2.

Recommendations

1. Results to be clinically correlated.
2. Rarely false negativity/positivity may occur.
3. Post test counseling available between 9.00 am to 5:00 pm at LPL laboratories.
