<b>ALDEHYDE CHOPRA TEST FOR KALA AZAR</b> (Tube clotting)			

**Comments**

Kala Azar is caused by Leishmania donovani leading to cutaneous / mucocutaneous / visceral Leishmaniasis. The disease is highly prevalent in India, Asia & Africa. The infection is usually benign, often subclinical and may involve liver, spleen, bone marrow and lymph nodes. Visceral leishmaniasis is also an opportunistic infection in individuals with concurrent HIV and these patients respond poorly to therapy.

Dr. Ritu Nayar MD (Microbiology) Deputy HOD Microbiology & Serology - NRL	Dr. Shalabh Malik MD (Microbiology) National Head - Microbiology & Serology - NRL
