 DELHI 110085

Name	: DUMMY--Z689	Collected	: 2/4/2018 7:01:00AM
Lab No.	: LPLT12384	Received	: 3/4/2018 2:36:41PM
Age:	15 Years	Reported	: 17/4/2018 4:52:38PM
Gender:	Male	Report Status	:
A/c Status	: P	Ref By	: -----

Test Name	Results	Units	Bio. Ref. Interval
ALLERGY ECZEMA PANEL FOR VEGETARIANS, SERUM (FEIA)			
Lentils		kUA/L	<0.35
Milk		kUA/L	<0.35
Peanut (Arachis hypogaea)		kUA/L	<0.35
Potato		kUA/L	<0.35
Rice (Oryza sativa)		kUA/L	<0.35
Soyabean (Glycine max)		kUA/L	<0.35
Wheat (Triticum aestivum)		kUA/L	<0.35
Dermatophagoide farinae (House Dust mite)		kUA/L	<0.35
Dermatophagoides pteronyssinus		kUA/L	<0.35

Interpretation

QUANTITATIVE RESULT IN kUA/L	LEVEL OF ALLERGEN SPECIFIC ANTIBODY	SYMPTOM RELATION
<0.10	Undetectable	Unlikely
0.10-0.50	Very low	Uncommon
0.50-2.00	Low	Low
2.00-15.00	Moderate	Common
15.00-50.00	High	High
50.00-100.00	Very High	Very High
>100.00	Very High	Very High

Note

- In vitro allergy tests are a valuable tool for the clinician to diagnose allergy, treat and predict disease development.

		Reported	: 17/4/2018 4:52:38PM

Test Name	Results	Units	Bio. Ref. Interval
	<ul style="list-style-type: none"> Eczema allergen specific IgE includes only common causative allergens and does not include all possible allergens. In cases of Eczema allergy, specific IgE antibodies may be undetectable inspite of a convincing clinical history because these antibodies may be directed towards allergens that are revealed or altered during industrial food processing, cooking or digestion and therefore do not exist in the original food for which the patient is tested. Normal IgE levels do not necessarily exclude the possibility of allergy because certain allergies can be non-IgE mediated. Very low levels of allergen specific IgE antibodies should be evaluated with caution when Total IgE values exceed 100 kUA/L All results should be interpreted in relation to the individual case history. 		

Comments

Eczema is principally a disorder of infancy and early childhood and one-third of these patients do not outgrow the disease and carry symptoms into adulthood. Allergic eczema is most often IgE associated (Atopic eczema) but can also be non IgE associated (Non Atopic Eczema). It is characterized by extreme pruritis and persistent scratching which leads to papulation, exfoliation, bleeding, oozing, crusting and secondary infections. It can involve any area of the body, but typical locations of involvement vary according to age. In infants, the area around the lower part of outer ear is often involved, whereas in pre-school children, the flexor side of extremities are involved. Common allergenic agents of Eczema are food (specially histamine releasing foods like chocolates, strawberries and additives), house dust mites & pets.

Prevalence of Eczema

AGE IN YEARS	PERCENTAGE POSITIVITY
0 - 1	60
1 - 5	30
6 - 20	10
